<u>Date:</u>
11/07/2018

<u>Attendance</u>
- Our Team:
    - Kevin, Lee, Nick
- Principal:
    - Ben

<u>Questions going into the meeting</u>
- PowerBI possibilities

<u>Overview on what was Discussed</u>
- Using PowerBI
- Avoid sending data to external APIs
-

<u>Discussion</u>
- Possibly start benchmarking on visuals
- PowerBI
    - Principal hasn't used embedded yet, used Pro and Enterprise
    - Comfortable with PowerBI, feedback would be easier from them
- Need to keep confidentiality
    - Can't send data to separate server to process data visuals
    - Possibly use different visualization libraries that don't send data to a different server
- Embedded makes sense for us, Premium might work but more expensive
    - Embedded uses Microsoft's API
- Plotly needs more overhead to implement into Principal than PowerBI
- ==ASAP: Learn what we need from PowerBI and send to Ben==
    - ==So we can figure out its potential==
    - ==How does the payment work?==
- How long to user input?
- Do we really need expected return user input? (Art, John)
- Try getting prototype dashboard before getting all requirements
