Date:
02/11/2019

Attendance
- Our Team:
  - Blake, Cole, Kevin, Lee, Nick
- Other:
  - Ben, Jonathan Ling, Farshad

Questions going into the meeting

Overview on what was Discussed
- Discussed UI Design changes and recommendations
- **Power BI Component is behind, needs more progress to stay on track**
- Went over the codebase for the new Principal team member Farshad

Discussion
- User Interface
  - Region Constraints will be added once that is functional on the backend
  - The constraint min/max still need to be added
    - And to handle if the user only inputs a single min or max value
      - Set a default value (Such as 0% for min and 100% for max)
  - Connection between frontend and backend needs to be worked on ASAP
    - This will probably create many issues when trying to connect things together
    - Start early on it
  - Some reorganization of the constain page is needed
    - How the buttons are arranged
    - Dropdowns might be useful
- **PowerBI**
  - **MUST BE DONE by next week**
    - PowerBI Dashboard made, even a basic one
      - Need something to discuss with client and go off of
    - REST API Working
      - 100% Done, this is a big task to ensure embedding into dash works nicely
    - Data Streaming either working or a concrete Plan In Place
  - **Overall, Power BI Component is behind, needs more progress to stay on track with the plan**
  -
