

Date:

02/18/2019

Attendance

- Our Team:
 - Blake, Cole, Kevin, Lee, Nick
- Other:
 - Ben, Jonathan Ling, Jonathan Frank Farshad

Questions going into the meeting

Overview on what was Discussed

- Weekly update regarding progress in Dash (UI), backend optimization, and PowerBI

Discussion

- Dash
 - Implement the ability to edit or overwrite a constraint
 - Does not have to be pretty at this state, functionality just needs to work
 - The layout design and extra features are second to the basic functions
- PowerBI
 - Authentication
 - Able to generate access tokens with Azure fine. However, once we have that token and request something like a dashboard from PowerBI it returns unauthorized.
 - Currently debugging into why this is the case
 - Dashboard
 - The team gave feedback on Kevins current design
 - Kevin was able to edit the dashboard live based on the feedback and clarify visuals that were added
 - **Next week goal**
 - Currently we have the unoptimized data, need to show optimized data side by side and on two seperate pages
 - Kevin has a color palette he will send kevin so that is done automatically
 - Streaming
 - Need to jsonify data and push it to a dataset in PowerBI
 - Requires authentication
 - To be functional
 - Midpoint presentation
 - March 4th same meeting time
 - Demo a basic working application
- Lee and Farshad are both working on similar things, they should get in contact to help each other
