

Date:

02/18/2019

Attendance

- Our Team:
 - Blake, Cole, Kevin, Lee, Nick
- Other:
 - Ben, Jonathan Ling, Jonathan Frank Farshad

Questions going into the meeting

Overview on what was Discussed

- Weekly update regarding progress in Dash (UI), backend optimization, and PowerBI

Discussion

- Dash
 - Little behind on the 0.3, but this shouldn't be an issue
 - Can email Jonathan Ling to set up user testing
 - Constraint pages are starting to come together
 - Interfacing with the backend is the next project so we can test functionality with live data
 - Look into saving constraints as a dcc.store
 - Saves it into the app
- Power BI
 - Authentication mostly done, just needs further testing on cases
 - Dashboard
 - Use group to organize data
 - Restrict user to select one or more (So they have to select some option)
 - Use tree maps on the left two graphs
 - Design a data structure so users only see their data and not affect other users
 - Have some way to save user optimizations
 - Possibility: If type slicer can be dynamic, add type 'optimized[0-9][0-9]'
